

Upgrade Your CM5014 Now

10" Color Touch Screen – SD Card Data Storage – LIMS Compatible

NO 3.5" Floppy Drive – NO Printer Required

LESS THAN HALF THE COST OF A NEW COULOMETER

The CM5014 Upgrade offers all the features of UIC's new CM5015 CO₂ Coulometer for less than half the cost.

The new user interface is a bright, 10" LCD touch screen that utilizes many of the same menu selections as the CM5014, allowing for a minimum of retraining.

The outdated 3.5" floppy drive is replaced with serial and Ethernet connection ports that allow the coulometer to be interfaced with a computer and/or LIMS.

Analytical data and system parameters are saved to a Secure Digital (SD) Card in a convenient and portable CSV data format. System parameters, and even cell set-up information, are retained even if the system

is powered down. The SD card also allows you to eliminate the printer and free up valuable bench space.

You get all of this extra utility while maintaining the superior, calibration-free analyses provided by UIC's rugged coulometric detector systems.

Ordering Information

CM5015U-01 – For CM5014 Serial Numbers 995014001 – 035014015. Includes: 10" Touch Screen, processor card, new A/D PCBs, Serial/Ethernet expansion ports, SD Card and USB SD Card reader, left side panel, operation manual, factory installation, calibration and QC testing. - \$8,200

CM5015U-02 – For CM5014 Serial Numbers 045014001 – 085014025. Includes: Same as above except no A/D PCBs. - \$6,700
